

BACKGROUND INFORMATION

Studies have reported that over 43% of the women in America experience little or no sexual satisfaction from clitoral orgasm and only 25% achieve orgasm with intercourse. In fact, according to studies, numerous women between the ages of 18 and 80 do not even know what an orgasm is or how it is achieved. Whether someone is mutli-orgasmic or among the 43% of women who are sexually frustrated, any woman who desires maximum sexual fulfillment, greater intimacy, and enhanced relationships stands to benefit from regular use of Scream Cream.

Scream Cream contains a combination of prescription and non-prescription components describe as blood flow enhancers and vasodilators. The formulation can be custom tailored to each individual's needs at the request of the prescriber. Each ¼ mL dose can contain Aminophylline 7.5 mg, Ergoloid Mesylate 0.123 mg, L-Arginine 15 mg, Pentoxifylline 12.5 mg, Sildenafil Citrate (Viagra) 2.5 mg, and Testosterone 0.25 mg dissolved in a water based hypoallergenic transdermal vehicle. The vehicle is designed to enhance the rate of absorption and to cause the medication to be retained locally in order to maximize local effects and metabolism while minimizing the potential for systemic side effects.

Developed by a pharmacist, the cream's sexual effects are subtle and natural feeling, yet profoundly increase a woman's sensitivity and improve the frequency and intensity of orgasms. Scream Cream's ingredients are FDA approved and proven to stimulate blood flow to the female genital area and increase a woman's sexual stimulation.

Empower
PHARMACY

How to Use

Scream Cream should be applied directly to the clitoris and external genitalia at least 15 minutes prior to sex and gently massaged in. Duration of effect ranges from 15 minutes to 2 hours and heightens both ease of stimulation and intensity of orgasm.

What are the possible side effects? Since Scream Cream is formulated to act locally, side effects are minimal. If you are sensitive to one of the components, then redness, rash, and local skin irritation are possible. Other rare side effects may include headache, light-headedness, dizziness, and restlessness.

Who should avoid using Scream Cream? If you have any of these conditions, you should not use Scream Cream before consulting with your doctor or pharmacist: Allergy or sensitivity to Scream Cream or any of its components. Genital herpes (L-Arginine in this product may facilitate replication of the herpes virus. An alternative formulation without L-Arginine is available.) Chronic vaginal infections. Serious medical conditions, such as heart disease or autoimmune disorder.

Testimonials

"This stuff really works! My husband wants to buy a truckload of Super Scream Cream. It was out of this world!" -Trish age 32

"I would just like to say thanks for introducing me to Scream Cream. This product is definitely heaven sent. I am in my late 30s and I have never been able to be sexually fulfilled until I used this." -Paige age 38

"Every woman should have this on their nightstand." -Lisa age 23

"After using this, I felt like I was 20 years old again sexually!" -Karen

"I was surprised at how well it worked the first time I used it. My husband and I are both retirement age and I feel it has enhanced our most private hours and we both thank you." -Sue

"My wife never climaxed before until I started to use Scream Cream. Now her toes curl with pleasure." -Dave
